CRYPTO FORECASTING RESEARCH · BTC · ETH · XRP · LINK

Will Bitcoin, Ether, XRP and Chainlink be higher or lower over the next 30 days? Below: what our tested models expect for each coin, which model has the best record, and what live Deribit option prices imply for each tested expiry. The research behind it asks whether price history or machine learning can beat a simple base rate.

30-day outlook: what the models expect

For each coin: the call (▲ FLAT), the chances of a move of more than 10% over the next 30 days, and the model with the best record on the final test. Recomputed daily from fresh prices.

Direction: not predictable · no reliable edge found

Machine learning models built to read trend and momentum were reliably worse than the base rate in 10 of 22 tests and reliably better in 0. For 3 of 4 coins, long-run history and the past year's trend point in opposite directions. So any UP or DOWN call below is a lean, not a forecast with a proven edge.

Size of moves: partly predictable · the models' real edge

Volatility models, which read the size of recent moves rather than which way, had positive skill against the base rate in 17 of 22 development tests (up to +14.2%). On the one-time final test, none passed every condition; the best, for BTC, was within noise. The ranges below are the most useful part of each outlook.

BTC

$77,424 · close of Oct 31, 2026

▲ FLAT

No directional edge. Most likely flat (within ±5%) · 72% chance of moving more than 10%

80% range in 30 days: **$66,001 – $88,650**

Headline model: **Logrenormal_70 day vol**. Best on the final test: +23.2% skill vs the base rate. Hit rate: lower (55% −7.9% vs 14.4%). Phrases to the same set of moves, not their direction.

Direction signals
Long-run history ▲ up +14 pts
Past-year trend ▼ down −11 pts

Options market (Nov 27, 2026, 26d)
▲ 14% ▲ 16%

ETH

$2,253 · close of Oct 31, 2026

▲ UP

Leans up. The share of moving more than 10% vs. 30% for the opposite move. Big moves are likely either way (67% chance of more than ±10%).

▲ down +10% within +10% ▲ up +10%
30% **33%** **37%**

80% range in 30 days: **$1,683 – $3,388**

Headline model: **Base rate (past frequency)**. No model beat its base rate on the final test; the closest was Logrenormal, 90-day vol (−1.8%).

Direction signals
Long-run history ▲ up +7 pts
Past-year trend ▼ down −15 pts

Options market (Nov 27, 2026, 26d)
▼ 21% ▲ 22%

XRP

$1.25 · close of Oct 31, 2026

▶ FLAT

No directional edge, but big swings are likely 62% chance of moving more than 10% either way.

▼ down −10% within +10% ▲ up +10%
38% **24%** **38%**

80% range in 30 days: **$0.92 – $1.85**

Headline model: **Base rate (past frequency)**. No model beat it on the final test; the closest was Lognormal, 90-day vol (−4.6%).

Direction signals
Long-run history ▶ flat −3 pts
Past-year trend ▼ down −22 pts

Options market (Nov 27, 2026, 26d)
▼ 23% ▲ 20%

LINK

$11.63 · close of Oct 31, 2026

▶ FLAT

No directional edge, but big swings are likely 72% chance of moving more than 10% either way.

▼ down −10% within +10% ▲ up +10%
38% **33%** **29%**

80% range in 30 days: **$7.84 – $15.57**

Headline model: **GARCH(1,1)-t**. Best on the final test: −2.1% skill in the base rate, within noise (95% −5.6% to +15.7%). It forecasts the size of moves, not their direction.

Direction signals
Long-run history ▶ flat +4 pts
Past-year trend ▼ down −9 pts

Options market no listed options

How the call is made. Headline model: the best skill on the seated final test (spot prices, 30 days) for that asset, or the base rate if no model beat it. UP or DOWN only when the headline model clears a directional edge; otherwise ▶ FLAT. Direction signals: the share of moves above vs. below the base rate, and the past year's trend. Options market: the at-the-money implied chance of a move up or down, as Deribit prices it. **FLAT**: Track record: 72 calls logged since Oct 14, 2026, the first call graded on Nov 13, 2026. These are research outputs, not investment advice.

Reading the options market

Market-implied, not a forecast
Probabilities come from option prices, which include a risk premium charged by dealers. Read them as the market's pricing, not a prediction or advice.

Ranges show quote uncertainty
Options trade with a bid and an ask. The quote range is every probability consistent with those prices: the wider it is, the thinner and less liquid.

"Not quoted" is not 0%
Far from today's price no options are quoted, so the market records nothing there. Those ranges are marked rather than guessed.

Market snapshot

Every listed expiry at a glance. The median and the 80% range are read off the market-implied curve: 10% of the probability sits below the range and 10% above it.

ASSET	EXPIRY	PRICE TODAY	MARKET MEDIAN	80% MARKET RANGE	CHANCE ABOVE TODAY	IMPLIED VOL
BTC	Nov 27, 2026 · 26 days	$77,788	**$78,318**	$68,083 – $87,838	**53%**	38%
